

Nauman Khan – Cover Letter

Dear Hiring Manager,

I am applying for the Senior Data Engineer position. With 8+ years of experience designing scalable cloud-native data platforms, enterprise ETL/ELT architectures, and real-time analytics systems, I bring strong expertise in Databricks, PySpark, Snowflake, Azure, SQL, and distributed data engineering aligned closely with your modern data platform initiatives.

In my current role as a Senior Data Engineer, I architect and optimize large-scale data pipelines processing more than 30 million daily events using Databricks, Apache Spark, Kafka, Snowflake, and cloud-native technologies. My experience includes building raw-to-gold lakehouse architectures, developing high-performance PySpark transformation pipelines, implementing streaming and batch ingestion frameworks, and supporting enterprise analytics and reporting workloads across regulated environments.

I have extensive experience designing scalable data ingestion pipelines integrating APIs, structured and unstructured files, databases, and event-driven systems into centralized data platforms. I have also led modernization initiatives involving cloud-native ELT architectures, CI/CD implementation, Infrastructure-as-Code with Terraform, and enterprise observability frameworks that improved reliability, scalability, and operational efficiency.

Beyond technical execution, I regularly collaborate with engineering, analytics, cloud, and business stakeholders to build governed, analytics-ready data assets supporting operational reporting, BI dashboards, and machine learning initiatives. My background includes developing secure and scalable data platforms across healthcare and financial domains requiring strong data quality, governance, compliance, and performance optimization practices.

What particularly interests me about this opportunity is the focus on building a modern enterprise data platform centered around Databricks, scalable data warehousing, and analytics enablement. I am confident my experience building high-volume data systems, optimizing distributed processing pipelines, and partnering cross-functionally on enterprise data initiatives would allow me to contribute effectively to your team.

Thank you for your consideration. I look forward to the opportunity to discuss how my technical background and data platform experience align with your organization's goals.

Sincerely,
Nauman Khan
