

Nauman Khan – Cover Letter

Dear Hiring Manager,

I am a Senior Data Engineer with 8+ years of experience designing and scaling cloud-native data platforms, real-time streaming architectures, and enterprise ETL/ELT pipelines across AI infrastructure, healthcare analytics, and financial data ecosystems. My background includes building distributed data systems using Python, Apache Spark, Kafka, Snowflake, Databricks, Airflow, and AWS technologies to support large-scale analytics, machine learning, and operational reporting workloads.

In my current role, I architect scalable data platforms processing more than 30 million daily events while supporting analytics and AI-driven applications. I have extensive experience developing batch and real-time data pipelines, optimizing distributed processing frameworks, implementing Infrastructure-as-Code using Terraform, and modernizing legacy ETL environments into cloud-native lakehouse architectures. My technical expertise spans data engineering, cloud infrastructure, orchestration, observability, streaming systems, and enterprise-scale performance optimization.

Throughout my career, I have partnered closely with engineering, analytics, cloud, security, and business stakeholders to deliver reliable and scalable data solutions aligned with operational and strategic objectives. I have led initiatives involving Snowflake optimization, Spark tuning, Airflow orchestration, cloud automation, and real-time event-driven architectures while improving system reliability, reducing operational overhead, and enhancing data accessibility across organizations.

In previous roles, I engineered HIPAA-compliant healthcare analytics platforms and financial transaction processing systems requiring high availability, governance, and secure cloud operations. These experiences strengthened my ability to work in fast-paced enterprise environments while delivering scalable, production-grade solutions supporting mission-critical business functions.

I bring a strong combination of technical depth, platform engineering expertise, and cross-functional collaboration experience, along with a consistent track record of delivering measurable impact through modern data engineering practices. I am confident I can contribute effectively to organizations seeking scalable, high-performance, and cloud-native data solutions.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my experience and technical background align with your team's goals.

Sincerely,
Nauman Khan
